

TxDOT/HAS Dimond Knoll Screening Project – April 6, 2013  
Bulletin #4

The screening crew working on Saturday, April 6. Note Beth and Tracy searching for flakes on top of Pile 1 while others screen for artifacts. The recent very heavy rains exposed many flakes on the surface of the piles.

Points and tools screened on April 6. The tiny point on the far left was found by Charlie, washed to the surface of Pile 1.

Check out this cool geode type ring of crystal forming inside a dirt clod (if any of you geologists out there can make this sound more intelligent let me know ☺)

The resident herd is never far away from our work space.
