

TxDOT/HAS Dimond Knoll Screening Project – May 3 - 4, 2013
Bulletin #8

Artifacts recovered from Pile 1 on Friday, May 3.

HAS members Bob Sewell, left and John Rich, right, admire a point just recovered by Robert Clark, a student at Saint Francis Episcopal School in Houston.

Artifacts recovered from Pile 1 on Saturday, May 4

Patti Bonin, a student at St. Thomas University and a paleontology summer camp instructor for the Houston Museum of Natural Science, tosses a shovel full of dirt into the screen.

Our PI, Dr. Jason Barrett, works with Danielle, a student at the University of Houston, who will be graduating in a few weeks with a degree in anthropology. Danielle had never worked at a prehistoric site before and found her first point on Friday!

The project does not end with screening dirt and recovering artifacts. On Monday nights we have a two-hour lab led by Dr. Barrett to identify and analyze the artifacts recovered the previous weekend at the screening site.
